TESTMARK Laboratories Ltd.

Drinking Water Packages

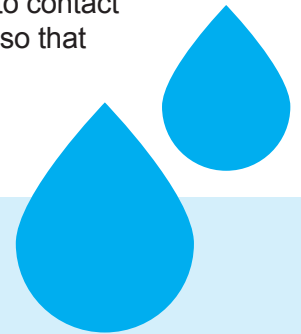

testmark.ca

A bit about our packages...

Testmark has built these packages to include some of the more commonly requested tests under Ontario's Drinking Water Standards. Although our Drinking Water Packages contain a good mix of operational and health-related tests, keep in mind that Testmark can provide a wide spectrum of other tests in the area of organic, inorganic, microbiological and toxicological testing. Please speak with a Customer Service Representative if you'd like to test for something beyond our standard packages.

Your Test Results... After tests are completed, you will receive a final laboratory report from our lab via the method you selected on your Chain of Custody form (email, mail, fax). Your lab report is a powerful tool that can help you or your water treatment provider determine what water treatment options are best-suited to your specific system. Most importantly, Testmark's final lab report will conveniently flag any test result that exceeds the limits set by the Ontario government for safe drinking water.

Regulated Systems... If you are requiring testing for a regulated drinking water system (under 0. Reg. 170, 0. Reg. 318/319 or 0. Reg. 243), please be sure to contact one of our Customer Service Representatives so that they may assist you in completing the required forms prior to submitting a sample.

Need to test your well water or cottage system?

Here are four cost-effective drinking water packages to choose from:

PACKAGE 1

- Metals
(scan of approx. 40 metals)
- Anions
(fluoride, nitrate, nitrite)
